

September 2021 **NEW!**

TCfeline Original premix is now formulated to enable you to prepare it with the addition of either raw fresh liver or raw freeze-dried liver!

Raw fresh liver is always best and a must for kittens, but for some adult cats and their humans not always an option. Adding raw freeze-dried liver instead has proven itself as a satisfactory alternative for many years.

This is especially good news for those cats who really miss the now discontinued "TCfeline with dry liver" variety, because this new alternative essentially replicates it.

Raw freeze dried liver (typically beef) is available in many pet stores as dog treats, cut into small cubes. Carefully read the label that the product you are choosing is 100% raw freeze dried liver without anything else added.

Preparation Instructions:

Makes 10 days of food for the average adult cat

1. Weigh 40 g (1/4 cup) TCfeline premix
2. Weigh 20 g (1/2 cup) freeze dried liver. Turn into a powder using a designated coffee bean grinder. Combine with 40 g TCfeline premix. Stir.
3. Add 310 ml (1-1/4 cup) cold water. Whisk thoroughly.
4. Add 900 g (2 lbs.) raw, boneless, lean meat of your choice. Combine. Divide food into daily portions. Freeze for storage .
